

Review Pathology Results - from anywhere in the world ... in Minutes!

Never Stand Still

NewSouth Innovations

Pathology exchange software allowing research institutions and specialists to share and review medical results, worldwide ... within minutes!

The Technology is available under licence for Free

Using the microscope to review pathology results could soon be obsolete!

UNSW researchers have developed software for worldwide exchange of “digital” pathology images and associated data.

This technology will allow institutions to share and review results – worldwide, within minutes.

It provides doctors, specialists and patients with a platform to view and deliver diagnostic advice.

It's extremely beneficial for patients in remote locations as their pathology samples can be reviewed by multiple doctors and specialists anywhere in the world.

Key Benefits

- Market ready!
- Improvement to existing “caTissue” software
- Flexible and scalable data exchange between labs
- Health monitoring capabilities
- Research exchange tool
- Designed to connect scientists and practitioners worldwide.

Applications

- A platform to link individual and institutional Biobanks

The Opportunity

This technology is available for free as an Easy Access Licence to companies and individuals.
